Beth Levin

Semantics and Cognition Ray S. Jackendoff, 1985-09-10 This book emphasizes the role of semantics as a bridge between the theory of language and the theories of other cognitive capacities such as visual perception and motor control.

EuroWordNet: A multilingual database with lexical semantic networks Piek Vossen, 2013-11-11 This book describes the main objective of EuroWordNet, which is the building of a multilingual database with lexical semantic networks or wordnets for several European languages. Each wordnet in the database represents a language-specific structure due to the unique lexicalization of concepts in languages. The concepts are inter-linked via a separate Inter-Lingual-Index, where equivalent concepts across languages should share the same index item. The flexible multilingual design of the database makes it possible to compare the lexicalizations and semantic structures, revealing answers to fundamental linguistic and philosophical questions which could never be answered before. How consistent are lexical semantic networks across languages, what are the language-specific differences of these networks, is there a language-universal ontology, how much information can be shared across languages? First attempts to answer these questions are given in the form of a set of shared or common Base Concepts that has been derived from the separate wordnets and their classification by a language-neutral top-ontology. These Base Concepts play a fundamental role in several wordnets. Nevertheless, the database may also serve many practical needs with respect to (cross-language) information retrieval, machine translation tools, language generation tools and language learning tools, which are discussed in the final chapter. The book offers an excellent introduction to the EuroWordNet project for scholars in the field and raises many issues that set the directions for further research in semantics and knowledge engineering.

English Verb Classes and Alternations Beth Levin, 1993-09 In this rich reference work, Beth Levin classifies over 3,000 English verbs according to shared meaning and behavior. Levin starts with the hypothesis that a verb's meaning influences its syntactic behavior and develops it into a powerful tool for studying the English verb lexicon. She shows how identifying verbs with similar syntactic behavior provides an effective means of distinguishing semantically coherent verb classes, and isolates these classes by examining verb behavior with respect to a wide range of syntactic alternations that reflect verb meaning. The first part of the book sets out alternate ways in which verbs can express their arguments. The second presents classes of verbs that share a kernel of meaning and explores in detail the behavior of each class, drawing on the alternations

in the first part. Levin's discussion of each class and alternation includes lists of relevant verbs, illustrative examples, comments on noteworthy properties, and bibliographic references. The result is an original, systematic picture of the organization of the verb inventory. Easy to use, *English Verb Classes and Alternations* sets the stage for further explorations of the interface between lexical semantics and syntax. It will prove indispensable for theoretical and computational linguists, psycholinguists, cognitive scientists, lexicographers, and teachers of English as a second language.

Competition and Variation in Natural Languages Mengistu Amberber, Helen de Hoop, 2005-06-30 This volume combines different perspectives on case-marking: (1) typological and descriptive approaches of various types and instances of case-marking in the languages of the world as well as comparison with languages that express similar types of relations without morphological case-marking; (2) formal analyses in different theoretical frameworks of the syntactic, semantic, and morphological properties of case-marking; (3) a historical approach of case-marking; (4) a psycholinguistic approach of case-marking. Although there are a number of publications on case related issues, there is no volume such as the present one, which exclusively looks at case marking, competition and variation from a cross-linguistic perspective and within the context of different contemporary theoretical approaches to the study of language. In addition to chapters with broad conceptual orientation, the volume offers detailed empirical studies of case in a number of diverse languages including: Amharic, Basque, Dutch, Hindi, Japanese, Kuuk Thaayorre, Malagasy and Yurakaré. The volume will be of interest to researchers and advanced students in the cognitive sciences, general linguistics, typology, historical linguistics, formal linguistics, and psycholinguistics. The book will interest scholars working within the context of formal syntactic and semantic theories as it provides insight into the properties of case from a cross-linguistic perspective. The book also will be of interest to cognitive scientists interested in the relationship between meaning and grammar, in particular, and the human mind's capacity in the mapping of meaning onto grammar, in general.

The Generative Lexicon James Pustejovsky, 1998-01-23 The first formally elaborated theory of a generative approach to word meaning, *The Generative Lexicon* lays the foundation for an implemented computational treatment of word meaning that connects explicitly to a compositional semantics. *The Generative Lexicon* presents a novel and exciting theory of lexical semantics that addresses the problem of the multiplicity of word meaning; that is, how we are able to give an infinite number of senses to words with finite means. The first formally elaborated theory of a generative approach to word meaning, it lays the foundation for an implemented computational treatment of word meaning that connects explicitly to a compositional semantics. In contrast to the static view of word meaning (where each word is characterized by a predetermined number of word senses) that imposes a tremendous bottleneck on the performance capability of any natural language processing system, Pustejovsky proposes that the lexicon becomes an active—and central—component in the linguistic description. The essence of his theory is that the lexicon functions generatively, first by providing a rich and expressive vocabulary for

characterizing lexical information; then, by developing a framework for manipulating fine-grained distinctions in word descriptions; and finally, by formalizing a set of mechanisms for specialized composition of aspects of such descriptions of words, as they occur in context, extended and novel senses are generated. The subjects covered include semantics of nominals (figure/ground nominals, relational nominals, and other event nominals); the semantics of causation (in particular, how causation is lexicalized in language, including causative/unaccusatives, aspectual predicates, experiencer predicates, and modal causatives); how semantic types constrain syntactic expression (such as the behavior of type shifting and type coercion operations); a formal treatment of event semantics with subevents); and a general treatment of the problem of polysemy. The Psycho-Biology Of Language George Kingsley Zipf,2013-11-05 This is Volume XXI in a series of twenty-one on the Cognitive Psychology. Originally published in 1936, this is a study on the introduction to Dynamic Philology.

The Semantics of Relationships R. Green,C.A. Bean,Sung Hyon Myaeng,2013-04-18 The genesis of this volume was the participation of the editors in an ACMISIGIR (Association for Computing Machinery/Special Interest Group on Information Retrieval) workshop entitled Beyond Word Relations (Hetzler, 1997). This workshop examined a number of relationship types with significance for information retrieval beyond the conventional topic-matching relationship. From this shared participation came the idea for an edited volume on relationships, with chapters to be solicited from researchers and practitioners throughout the world. Ultimately, one volume became two volumes. The first volume, Relationships in the Organization of Knowledge (Bean & Green, 200 I), examines the role of relationships in knowledge organization theory and practice, with emphasis given to thesaural relationships and integration across systems, languages, cultures, and disciplines. This second volume examines relationships in a broader array of contexts. The two volumes should be seen as companions, each informing the other. As with the companion volume, we are especially grateful to the authors who willingly accepted challenges of space and time to produce chapters that summarize extensive bodies of research. The value of the volume clearly resides in the quality of the individual chapters. In naming this volume The Semantics of Relationships: An Interdisciplinary Perspective, we wanted to highlight the fact that relationships are not just empty connectives. Relationships constitute important conceptual units and make significant contributions to meaning.

Breadth and Depth of Semantic Lexicons E. Viegas,2014-01-15

Recent Advances in Computational Terminology Didier Bourigault,Christian Jacquemin,Marie-Claude L'Homme,2001-06-15 This first collection of selected articles from researchers in automatic analysis, storage, and use of terminology, and specialists in applied linguistics, computational linguistics, information retrieval, and artificial intelligence offers new insights on computational terminology. The recent needs for intelligent information access, automatic query translation, cross-lingual information retrieval, knowledge management, and document handling have led practitioners and

engineers to focus on automated term handling. This book offers new perspectives on their expectations. It will be of interest to terminologists, translators, language or knowledge engineers, librarians and all others dependent on the automation of terminology processing in professional practices. The articles cover themes such as automatic thesaurus construction, automatic term acquisition, automatic term translation, automatic indexing and abstracting, and computer-aided knowledge acquisition. The high academic standing of the contributors together with their experience in terminology management results in a set of contributions that tackle original and unique scientific issues in correlation with genuine applications of terminology processing.

Argument Structure Jane Grimshaw, 1992-04-22 Argument Structure is a contribution to linguistics at the interface between lexical syntax and lexical semantics. It formulates an original and highly predictive theory of argument structure that accounts for a large number of syntactic phenomena. The main analytical focus is on passives, nominals, psychological predicates, and the theory of external arguments. In the course of Argument Structure, Jane Grimshaw suggests that, contrary to the prevailing view, argument structure is in fact structured; it encodes prominence relations among arguments which reflect both their thematic and their aspectual properties. The prominence relations support a new theory of external arguments, with far reaching consequences for the syntactic behavior of predicates, and the nature of cross-categorical variation in argument structure.

Totally Tough Brainteasers Leonid Mochalov, Leonid Petrovich Mochalov, 2003 To solve these inventive brainteasers, your brain has to be in tip-top shape. Warm up with some (slightly) easier puzzles: beginning in the left corner of a box with grids, try to reach the bottom right square. You may pass only through the left and right sides of small squares, but not through their top or bottom. And you can't go through the black squares at all. Another challenge involves four dice, all stacked up. Can you find a pattern that lets you figure out how many pips are on the base side? Arrange the magical dominoes precisely and mathematically; do the equations to figure out how. There are also unusual card tricks, cut-it puzzles that involve reconstructing figures that have been broken up, and three-dimensional conundrums. As you work each one out, you'll feel yourself getting smarter every minute.
